The fixed-anvil temperature (FAT) theory, first proposed by Hartmann and Larson (2002), argues that tropical deep convective cloud anvil temperatures remain approximately constant as the climate warms, making tropical outgoing longwave radiation (OLR) for the cloudy sky depend little on the increasing surface temperature. In the tropical average, the detrainment altitude of deep convective clouds

Fixed temperature heat detectors. This is the most common type of heat detector. Fixed temperature detectors operate when the heat sensitive eutectic alloy reaches the eutectic point changing state from a solid to a liquid. Thermal lag delays the accumulation of heat at the sensitive element so that a fixed-temperature device will reach its operating temperature sometime after the surrounding ...

Answer Use the equation.  $\text{Temperature} = (5 - 3) / (8 - 3) \times 100 = 40^\circ\text{C}$ . Absolute or Thermodynamic Temperature Scale

The problem with the centigrade scale is that the thermometric properties do not follow a straight line between the two fixed points. So centigrade scales are inaccurate at all points except for the fixed points.
