The probability P(c < X < d) may be found by computing the area under f(x), between c and d Since the corresponding area is a rectangle, the area may be found simply by multiplying the width and the height. 5.3 The Exponential Distribution. If X has an exponential distribution with mean  $\mu$ , then the decay parameter is  $m = 1/\mu$ , and we write  $X \sim \text{Exp}(m)$  where  $x \geq 0$  and  $m > 0$ .

The probability density function (pdf) is used to describe probabilities for continuous random variables. The area under the density curve between two points corresponds to the probability that the variable falls between those two values. In other words, the area under the density curve between points a and b is equal to P(a < x < b)). The cumulative distribution function (cdf) gives the ...
