The essential guide to the theory and application of the Social Change Model Leadership for a Better World provides an approachable introduction to the Social Change Model of Leadership Development (SCM), giving students a real-world context through which to explore the seven C's of leadership for social change as well as a approaches to socially responsible leadership. From individual, group, and community values through the mechanisms of societal change itself, this book provides fundamental coverage of this increasingly vital topic. Action items, reflection, and discussion questions throughout encourage students to think about how these concepts apply in their own lives. The Facilitator's Guide includes a wealth of activities, assignments, discussions, and supplementary resources to enrich the learning experience whether in class or in the co-curriculum. This new second edition includes student self-assessment rubrics for each element of the model and new discussion on the critical roles of leadership self-efficacy, social perspective, and social justice perspectives. Content is enriched with research on how this approach to leadership is developed, and two new chapters situate the model in a broader understanding of leadership and in applications of the model. The Social Change Model is the most widely-used leadership model for college students, and has shaped college leadership curricula at schools throughout the U.S. and other countries including a translation in Chinese. This book provides a comprehensive exploration of the model, with a practical, relevant approach to real-world issues. Explore the many facets of social change and leadership Navigate group dynamics surrounding controversy, collaboration, and purpose Discover the meaning of citizenship and your commitment to the greater good Become an agent of change through one of the many routes to a common goal The SCM is backed by 15 years of research, and continues to be informed by ongoing investigation into the interventions and environments that create positive leadership development outcomes. Leadership for a Better World provides a thorough, well-rounded tour of the Social Change Model, with guidance on application to real-world issues.

The long awaited sequel to the landmark work first published in 1991, this volume continues the longitudinal study of how the college experience impacts on the lives of students in the US.

As academic service-learning continues to grow rapidly, practitioners are discovering a pressing need for solid empirical research about learning outcomes. Where's the Learning in Service-Learning? helps define learning expectations, presents data about learning, and links program characteristics with learning outcomes. It is the first book to explore the experience of service-learning as a valid learning activity.

This book begins with six articles that address how psychological theory, research, and practice bear on collaborating with communities, interpreting changes in students, and using psychological techniques to understand and act on social problems. The remaining articles demonstrate how service-learning can be effectively integrated into a variety of psychology courses so that student learning is enhanced in breadth and depth. Woven through all of the chapters are the five values that Prilleltensky (1997) identifies as most salient for how psychologists can foster the good life: compassion, self-determination, human diversity, collaboration and democratic participation, and distributive justice. Learning how to learn is an essential preparation for lifelong learning. Whilst this is widely acknowledged by teachers, they have lacked a rich professional knowledge base from which they can teach their pupils how to learn. This book makes a major contribution to the creation of such a professional knowledge base for teachers by building on previous work associated with 'formative assessment' or 'assessment for learning' which has a strong evidence base, and is now being promoted nationally and internationally. However, it adds an important new dimension by reporting the conditions within schools, and across networks of schools, that are conducive to the promotion, in classrooms, of learning how to learn as an extension of assessment for learning. There is a companion book, Learning How to Learn in Classrooms: Tools for schools (also available from Routledge), which provides practical resources for those teachers looking to put into practice the principles covered in this book.

This research paper looks at the work of independent school in making connections and helping to build communities, sometimes internationally. Almost all independent schools in Victoria have, as an explicit educational aim, the creation of opportunities for students to learn in their communities, with their communities, and to work for their communities. Some of these opportunities exist within the curriculum framework, and others occur within a community service programme, but they all have the goal of working with others and, through this, to grow in understanding and to foster a strong sense of civic and community responsibility. [p.5, ed].

Young adulthood - ages approximately 18 to 26 - is a critical period of development with long-lasting implications for a person's economic security, health and well-being. Young adults are key contributors to the nation's workforce and military services and, since many are parents, to the healthy development of the next generation. Although 'millennials' have received attention in the popular media in recent years, young adults are too rarely treated as a distinct population in policy, programs, and research. Instead, they are often grouped with adolescents or, more often, with all adults. Currently, the nation is experiencing economic restructuring, widening inequality, a rapidly rising ratio of older adults, and an increasingly diverse population. The possible transformative effects of these features make focus on young adults especially important. A systematic approach to understanding and responding to the unique circumstances and needs of today's young adults can help to pave the way to a more productive and equitable tomorrow for young adults in particular and our society at large. Investing in The Health and Well-Being of Young Adults describes what is meant by the term young adulthood, who young adults are, what they are doing, and what they need. This study recommends actions that nonprofit programs and federal, state, and local agencies can take to help young adults make a successful transition from adolescence to adulthood. According to this report, young adults should be considered as a separate group from adolescents and older adults. Investing in The Health and Well-Being of Young Adults makes the case that increased efforts to improve high school and college graduate rates and education and workforce development systems that are more closely tied to high-demand economic sectors will help this age group achieve greater opportunity and success. The report also discusses the health status of young adults and makes recommendations to develop evidence-based practices for young adults for medical and behavioral health, including preventions. What happens during the young adult years has profound implications for the rest of the life course, and the stability and progress of society at large depends on how any cohort of young adults fares as a whole. Investing in The Health and Well-Being of Young Adults will provide a roadmap to improving outcomes for this age group as they transition from adolescence to adulthood.

This book examines volunteering in detail from a civil society perspective, using empirical data garnered from various sources for countries all over the globe. The contributions deal with a broad spectrum of questions, ranging from the diversity, social and cultural determinants and organizational settings of volunteering, to its possible individual, social, and political effects.
