known as Euclid of Alexandria, was a Greek mathematician, often referred to as the Father of Geometry. He was active in Alexandria during the reign of Ptolemy I (323–283 BC). His *Stoicheia* (*Elements*) is a 13-volume exploration of all corners of mathematics, based on the works of, inter alia, Aristotle, Eudoxus of Cnidus, Plato, Pythagoras ...

~~Euclid's Elements - Wikipedia~~

To illustrate how far Apollonius had taken geometric constructions beyond that of Euclid's Elements we consider results which are known to have been contained in Tangencies. In the Elements Book III Euclid shows how to draw a circle through three given points. He also shows how to draw a tangent to three given lines.

It is likely that the first four books
of Apollonius's work come directly
from Euclid. According to Pappus,
"Apollonius, having completed
Euclid's four books of conics and
added four others, handed down
eight volumes of conics." The

mathematician. Together with Archimedes and Apollonius of Perga, after him, Euclid was soon included in the triad of the great mathematicians of Antiquity. However, in light of the immense influence that his work would exert throughout history, it must also be considered as one of the most illustrious of all times.
