Maoism, or Mao Zedong Thought (Chinese: 毛泽东思想; pinyin: Máo Zédōng sīxiǎng), is a variety of Marxism-Leninism that Mao Zedong developed for realising a socialist revolution in the agricultural, pre-industrial society of the Republic of China and later the People's Republic of China. The philosophical difference between Maoism and Marxism-Leninism is that the peasantry are the ...

The American Revolution was a home-front war that brought scarcity, bloodshed, and danger into the life of every American. In this groundbreaking history, Carol Berkin shows us how women played a vital role throughout the conflict. The women of the Revolution were most active at home, organizing boycotts of British goods, raising funds for the fledgling nation, and managing the family business while struggling to maintain a modicum of normalcy as husbands, brothers and fathers died. Yet Berkin also reveals that it was not just the men who fought on the front lines, as in the story of Margaret Corbin, who was crippled for life when she took her husband's place beside a cannon at Fort Monmouth. This incisive and comprehensive history illuminates a fascinating and unknown side of the struggle for American independence.

Education in Revolutionary Struggles introduces us to the fascinating world of Latin American educational thought in the third quarter of the 20th century. It discusses the contributions of three of the most distinguished intellectuals of the period - Iván Illich, Paulo Freire and Ernesto Guevara - and more specifically their answers to the eternal challenge: What is - or should be - the role of education in the profound structural and/or revolutionary transformation of our societies? The first part of the book identifies the cultural, economic and political context of the revolutionary years in Latin America. This historical framework is of particular interest because it is the setting for the intellectual and educational debates in which these three thinkers took part. The second part, the heart of the book, expounds in depth how Iván Illich, Paulo Freire and Ernesto Guevara contributed to understanding of how education is linked to the transformation of society. The third and final part

highlights the most fertile dimensions of the educational thought of Iván Illich, Paulo Freire and Ernesto Guevara - deschooling, liberation education and revolutionary education respectively - and analyses the points where their conceptions of "education in revolutionary struggles" converged, complemented one another or diverged.

Nobel Prize winning economist and former World Bank Chief Economist, Joseph Stiglitz, has repeatedly discussed the importance of transparency in policymaking at the World Bank and International Monetary Fund. He believes a lack of transparency in the two institutions has led to bad decisions. Bad decisions at IMF and the World Bank mean real pain for the world's poor. There is a perception that "the suits" close the World Bank's doors to deliberate the fate of earth's poorest populations and only when the doors are unlocked do people living in poverty learn what has been decided about their future. Meanwhile donations are down. The bank's critical International Development Association's funding has dropped dramatically. Managers are discouraged by studies examining the World Bank's effectiveness. How, they wonder, could such large beneficences have so little impact on poor populations? Events of the past two years have only increased the stakes. First, rising fuel prices caused a worldwide rise in the price of basic foods. Then the deepest economic downturn since the Great Depression sapped donor nation's coffers. By the end of the Bush administration in 2009, giving by the USA lagged more than any other wealthy nation. In 1999, two Bank researchers understood the situation was already on a precipice. World Bank loans had ceased to make significant impact on poverty in many client nations. Certain governments and multi-national corporations were destroying environments and desecrating indigenous cultures, all to achieve short-term gains for a fortunate few. Demonstrable successes were few, and every World Bank conference became a melee of demonstrators and police. The two researchers asked themselves whether it was possible to open up the institution by increased transparency, improve its accountability, and mute criticism. They decided to launch an internet-based broadcast to disseminate unedited videos of internal discussions and debates. The bank's culture and bureaucracy, hardened over a half-century, presented them with a formidable foe. Some powerful officials feared the transparency initiative; others withheld public support while standing on the sidelines. The World Bank Unveiled documents this epic struggle. It is the story of a revolution to transform the World Bank and a case study of the power of the Bank to transform people's lives.

A chronicle of the modern struggle for gay, lesbian and transgender rights draws on interviews with politicians, military figures, legal activists and members of the LGBT community to document the cause's struggles since the 1950s.

In September 2017, Hurricane Maria hit Puerto Rico, completely upending the energy grid of the small island. The nearly year-long power outage that followed vividly shows how the new climate reality intersects with race and access to energy. The island is home to brown and black US citizens who lack the political power of those living in the continental US. As the world continues to warm and storms like Maria become more commonplace, it is critical that we rethink our current energy system to enable reliable, locally produced, and locally controlled energy without replicating the current structures of power and control. In *Revolutionary Power*, Shalanda Baker arms those made most vulnerable by our current energy system with the tools they need to remake the system in the service of their humanity. She argues that people of color, poor people, and indigenous people must engage in the creation of the new energy system in order to upend the unequal power dynamics of the current system. *Revolutionary Power* is a playbook for the energy transformation complete with a step-by-step analysis of the key energy policy areas that are ripe for intervention. Baker tells the stories of those who have been left behind in our current system and those who are working to be architects of a more just system. She draws from her experience as an energy-justice advocate, a lawyer, and a queer woman of color to inspire activists working to build our new energy system. Climate change will force us to rethink the way we generate and distribute energy and regulate the system. But how much are we willing to change the system? This unique moment in history provides an unprecedented opening for a deeper transformation of the energy system, and thus, an opportunity to transform society. *Revolutionary Power* shows us how.

In the best tradition of historical writing, this fascinating study concentrates on the distinguishing characteristics of the Russian and Chinese experiences of revolution during the same time period. Using quotations, anecdotes, and colorful descriptive material, the authors unravel the tangle of people, places, and events central to understanding the nature of revolutionary change.
