Managing your condition effectively, particularly after a relapse. Depending on your symptoms, you may only occasionally need rehabilitation or you may require these therapies regularly to help you stay as healthy as possible.

Rehabilitation Therapies in Multiple Sclerosis

Some people with severe MS may lose the ability to walk independently or at all, while others may experience long periods of remission without any new symptoms. There's no cure for multiple sclerosis. However, treatments can help speed recovery from attacks, modify the course of the disease and manage symptoms.

Rehabilitation is an essential component of comprehensive care for persons with multiple sclerosis (MS). MS is an unpredictable, fluctuating disease that progresses over time. Therefore, the rehabilitation team must be knowledgeable about the range of symptoms that can occur and be responsive to their variability from one person to another.

Multiple sclerosis (MS), also known as encephalomyelitis disseminata, is a demyelinating disease in which the insulating covers of nerve cells in the brain and spinal cord are damaged. This damage disrupts the ability of parts of the nervous system to transmit signals, resulting in a range of signs and symptoms, including physical, mental, and sometimes psychiatric problems.

~~Multiple sclerosis—Wikipedia~~

"Multiple sclerosis is a neurodegenerative disease, meaning neurons in the brain can break down or die, and this can greatly affect a person's thinking skills," said study author Ralph H. B ...
