$$p^2 = 2m + k x^2$$

Calculate the classical partition function $Z =$

$$Z = \int dp \int dx \exp(-\beta H(p,x))$$

Using the partition function, calculate the heat capacity $3k_B$.

Conclude that if you

Read PDF

Physics 3

can consider a solid to consist of N atoms all in harmonic wells, then the heat capacity should be $3Nk_B = 3R$, in agreement with the law of Dulong and Petit.
