By tracing the depictions of sea monsters throughout the centuries, Van Duzer presented an evolution from a world full of dangers lurking in distant oceans where gigantic octopuses and whales drag ships and sailors into the sea, to 17th century maps showing ships exerting dominion over the beasts of the ocean.

Now I will tell you that there are two sea-monsters. One is called the hafgufa [sea-mist], another lyngbagr [heather-back]. It [the lyngbagr] is the largest whale in the world, but the hafgufa is the hugest monster in the sea. It is the nature of this creature to swallow men and ships, and even whales and everything else within reach.

“ Medieval and Renaissance map scholar, Chet Van Duzer, backed by the British Library as publisher, have teamed up to produce a spectacular new book, *Sea Monsters on Medieval and Renaissance Maps*, a topic, oddly enough, for which there is little by way of real precedent. This book will become the sea monster authority by default.

In Greek mythology, it is common for a sea monster to be referred to as Cetus. This term is fairly vague. Based on context clues, however, it seems likely that Cetus was some sort of serpent/dragon, shark, whale, or fish. The most famous instance of Cetus being used is when Poseidon sent Cetus to devour Andromeda.

From dragons and serpents to many-armed beasts that preyed on ships and sailors alike, sea monsters have terrified mariners across all ages and cultures and have become the subject of many tall tales from the sea. Accounts of these creatures have also inspired cartographers and mapmakers, many of whom began decorating their maps with them to indicate unexplored areas or areas about which little was known. Whether swimming vigorously, gamboling amid the waves, attacking ships, or simply displaying themselves for our appreciation, the sea monsters that appear on medieval

and Renaissance maps are fascinating and visually engaging. Yet despite their appeal, these monsters have never received the scholarly attention that they deserve. In *Sea Monsters on Medieval and Renaissance Maps*, Chet Van Duzer analyzes the most important examples of sea monsters on medieval and Renaissance maps produced in Europe. Van Duzer begins with the earliest mappaemundi on which these monsters appear in the tenth century and continues to the end of the sixteenth century and, along the way, sheds important light on the sources, influences, and methods of the cartographers who drew or painted them. A beautifully designed visual reference work, *Sea Monsters on Medieval and Renaissance Maps* will be important not only in the history of cartography, art, and zoological illustration,

but also in the history of the geography of the "marvelous" and of Western conceptions of the ocean.

The mythic creature expert and author of Phoenix takes readers through a bestiary of sea monsters featured on the famous 16th century map Carta Marina. In the sixteenth century, sea serpents, giant man-eating lobsters, and other monsters were thought to swim the waters of Northern Europe, threatening seafarers who ventured too far from shore. Thankfully, Scandinavian mariners had Olaus Magnus, who in 1539 charted these fantastic marine animals in his influential map of the Nordic countries, the Carta Marina. In Sea Monsters, mythologist Joseph Nigg brings readers face-to-face with these creatures and other

magnificent components of Magnus ' s map. Nearly two meters wide in total, the map ' s nine wood-block panels comprise the largest and first realistic portrayal of the region. But in addition to its important geographic significance, Magnus ' s map goes beyond cartography to scenes both domestic and mystic. Close to shore, Magnus shows humans interacting with common sea life—boats struggling to stay afloat, merchants trading, children swimming, and fisherman pulling lines. But from the offshore deeps rise some of the most terrifying sea creatures imaginable—like sea swine, whales as large as islands, and the Kraken. In this book, Nigg draws on Magnus ' s own text to further describe and illuminate these inventive scenes and to flesh out the stories of the monsters. Sea Monsters is

From satyrs and sea creatures to griffins and dragons, monsters lay at the heart of the medieval world. Believed to dwell in exotic, remote areas, these inexplicable parts of God's creation aroused fear, curiosity and wonder in equal measure. Powerfully captured in the illustrations of manuscripts, such as bestiaries, travel books and devotional

works, they continue to delight audiences today with their vitality and humour. Medieval Monsters shows how strange creatures sparked artists' imaginations to remarkable heights. Half-human hybrids of land and sea mingle with bewitching demons, blemmyae, cyclops and multi-headed beasts of nightmare and comic grotesques. Over 100 wondrous and terrifying images offer a fascinating insight into the medieval mind.

Thirty detailed illustrations portray giant squid, great white shark, double-crested crocodile, other real animals, as well as such fanciful beasts as the tusked pig whale, Bardfyshe, and Loch Ness monster.

*Includes pictures *Includes accounts of legendary sea monsters *Includes online resources and a bibliography for further reading The oceans of the world have always had an air of mystery. About 71% of the Earth's surface is covered by water, and until the 20th century no one had plumbed its depths. Even today the bigger seas and oceans remain a largely unexplored frontier, with new species being

Online Library Sea Monsters On Medieval

discovered every year. Thus it comes as no surprise that countless legends have arisen of strange creatures lurking in the depths. What follows is just a sampling of these stories, including sightings of unusual sea creatures by experienced witnesses in the 19th, 20th, and even 21st centuries. The idea that there might be large species still swimming in the oceans that haven't been classified by marine biologists isn't as far-fetched as it might sound. For example, the megamouth shark (*Megachasma pelagios*) was entirely unknown to science until a U.S. Naval vessel off the coast of Hawaii accidentally skewered one on its anchor. The megamouth shark is a deepwater shark that can reach up to 18 feet in length, making it quite a large creature to go unnoticed for so long. In fact, since its accidental discovery,

fewer than a hundred specimens have been spotted and the species had only been filmed three times. The Peruvian beaked whale (*Mesoplodon peruvians*) was discovered the same year and not formally described until 1991. Very little is known about this small species of whale that has only been seen off the west coast of Central and South America. Even more poorly known is the Spade-toothed whale (*Mesoplodon traversii*), which was first documented in 1872 thanks to the discovery of a partial jaw in New Zealand. It wasn't recognized as a distinct species until a partial skull was found in 1986, and no complete body was found until two specimens washed ashore in New Zealand in 2010. The fact that an entire species of whale is known to exist and yet no one has ever seen one alive adds fuel to the imagination

of any monster hunter, who insists that there may be even more intriguing unknown species waiting to be discovered. Cryptozoology is the science that investigates these creatures, which investigators generally call "cryptids". The word is made up of the Greek stem "kryptos" (hidden) and suffix "zoology" (study of animals), thus cryptozoology is the study of hidden, as-yet-undiscovered animals.

Cryptozoologists are quick to point out that they are not searching for alien beings or occult creatures; they do not hunt UFOs or ghosts. They are serious scientists, some amateur and some with professional degrees, who want to find, study, and protect these rare species. *Sea Monsters: A History of Creatures from the Haunted Deep in Legend and Lore* profiles the various sea creatures that people have told
