Silence seems more sought-after than words, and willingness to learn more prudent than the desire to speak. Fear of the inconceivable consequences and even more so the inability to assess them, experiments with the unknown, the likelihood that basic historical, ethical and social values may change forever, but mainly the replacement of God in His wondrous work of creation--the onset of human life--places the ethics of reproductive technologies on the frontline of contemporary bioethics.

The ethics of assisted reproduction – PubMed

The basic ethical issues of assisted reproduction are the respect for human life, for human nature and for human relations—that is the status of the embryo, the definition of the borderline between technological intervention and medical therapy, and the protection of the institution of marriage, respectively. 7.1. The status of the embryo

ART: IVF. 2. In Vitro Fertilization (IVF) is when both the egg and sperm are removed from the reproductive organs of the female and male. For males this is pretty easy, but for females it's a little ...

The Ethics of Assisted Reproduction Practices | Study.com

The Ethics of Assisted Reproductive Technologies. By OBOS Infertility Contributors | October 15, 2011. Assisted reproduction can raise complicated ethical challenges for the individuals involved, health care professionals, and the greater society. Infertility treatments today create new definitions of parents and children and require a rethinking of the conventional notions of family.

The Ethics of Assisted Reproductive Technologies – Our ...

Ethics and Assisted Reproductive Technology. In 1978, the first successful use of in vitro fertilization (IVF) gave birth to Louise Joy Brown and to the field of medicine known as assisted reproductive technology (ART), allowing infertile couples, those who carry gene-related illness, single women, gay and lesbian couples, and others to become biological parents.

Ethics and Assisted Reproductive Technology | Journal of ...

The bioethical assessment of assisted reproduction techniques includes analysis of the embryo losses caused by their selection and manipulation through preimplantation genetic diagnosis, 'social freezing' or the possible lack of rigour in the information provided by the clinics involved, to which must be added the higher morbidity reported in babies born as a result of these procedures.

~~Bioethics of Assisted Reproductive Technology | IntechOpen~~

According to the Vatican's Instruction Donum Vitae, the permissibility of assisted reproductive procedures revolves around their relationship to natural intercourse: "If the technical means facilitates the conjugal act or helps it to reach its natural objectives, it can be morally acceptable. If, on the other hand, the procedure were to replace the conjugal act, it is morally illicit" [II, B, 6].

the use of donor sperm (donor insemination) or eggs (egg donation). These treatments are described in the sections that follow. Other methods of assisted reproduction called gamete intrafallopian transfer (GIFT) or zygote intrafallopian transfer (ZIFT) are not recommended. Certain forms of assisted reproduction (IUI, IVF, ICSI, donor insemination and egg donation) are regulated by law and their use is controlled by the Human Fertilisation and Embryology Authority (HFEA; www.hfea.gov.uk).

~~Assisted reproduction | Information for the public ...~~

Reproductive ethics is concerned with the ethics surrounding human reproduction and beginning-of-life issues such as contraception, assisted reproductive technologies (e.g., in vitro fertilization, zygote intrafallopian transfer (ZIFT), intracytoplasmic sperm injection (ICSI), etc.), surrogacy, and preimplantation genetic diagnosis.

~~Reproductive Ethics | The Center for Bioethics & Human Dignity~~

Assisted reproductive technology (ART) generally refers to a category of fertility treatments in which eggs are surgically removed from a woman's ovaries, fertilized with sperm in a laboratory by means of in vitro fertilization (IVF), and then placed in the uterus of the woman who provided the eggs or in the uterus of another woman (Centers for Disease Control and Prevention, 2010). This procedure may result in creating more fertilized eggs, or embryos, than are needed by the donors for ...
