Wave Actions. In this waves instructional activity, students read about the ways waves react depending on the boundary they encounter. They read about natural frequency, resonance, phases and interference in waves. They match 13 terms with their definitions, they match pendulums to their phases, they identify absorption, reflection, refraction and diffraction and they find frequencies in waves.

There are four ways a wave can react depending on the boundary it encounters: Absorption; Reflection; Refraction; Diffraction. Hard Boundaries Reflect Reflection—a wave bounces off when it hits a hard boundary. Example: When you yell against a wall, the sound wave reflects Reflection off of the wall. Wave Action and Erosion. Waves are important for building up and breaking down shorelines. Waves transport sand onto and off of beaches, transport sand along beaches, carves structures along the shore. The largest waves form when the wind is very strong, blows steadily for a long time, and blows over a long distance.

One of the most time-consuming tasks in clinical medicine is seeking the opinions of specialist colleagues. There is a pressure not only to make referrals appropriate but also to summarize the case in the language of the specialist. This book explains basic physiologic and pathophysiologic mechanisms of cardiovascular disease in a straightforward manner, gives guidelines as to when referral is appropriate, and, uniquely, explains what the specialist is likely to do. It is ideal for any hospital doctor, generalist, or even senior medical student who may need a cardiology opinion, or for that ma.

Waves in Oceanic and Coastal Waters describes the observation, analysis and prediction of wind-generated waves in the open ocean, in shelf seas, and in coastal regions with islands, channels, tidal flats and inlets, estuaries, fjords and lagoons. Most of this richly illustrated book is devoted to the physical aspects of waves. After introducing observation techniques for waves, both at sea and from space, the book defines the parameters that characterise waves. Using basic statistical and physical concepts, the author discusses the prediction of waves in oceanic and coastal waters, first in terms of generalised observations, and then in terms of the more theoretical framework of the spectral energy balance. He gives the results of established theories and also the direction in which research is developing. The book ends with a description of SWAN (Simulating Waves Nearshore), the preferred computer model of the engineering community for predicting waves in coastal waters.

Make Waves encourages readers to step up and be the one to initiate change in their work and lives. Author Patti Johnson walks readers through the tools and techniques that they can use to create change in their own situations. Johnson elaborates on these tools even further to give readers a sense of how to encourage and instill these "wave-making" behaviors in others within their organization. Using several diverse case studies as illustrative examples, Make Waves highlights the important steps that individuals at any level can take toward positive change. By reinforcing readers' desires to contribute and make a difference, Johnson connects on an individual level and bridges the gap between that desire and the actions necessary to realize bigger changes. Change can be big or small. It is the act of stepping up that Johnson embraces, as well as the ripple effect on those around. Interviews with famous Wave Makers, as well as everyday people, illustrate why it is important to be the one to start change. Wave Makers profiled include: Clint Hurdle: Manager of the Pittsburgh Pirates; believes in positive attitude and culture and changes the MLB clubhouse; this year leading the Pirates to their first winning season since 1992. Charley Johnson: Started Pay It Forward foundation. Joe Nussbaum: Started Big Event at Texas A&M when in college in the '80s and has continued to grow; largest one-day college community service day in the country and has been adopted by over seventy universities. Emma Scheffler: High school soccer player who started Insulin Angels, a nonprofit for children diagnosed with diabetes, after her own diagnosis; feared her dream of college soccer was over, so engaged other students and local hospitals after thinking about how to make her diagnosis a positive. Allen Stephenson: Started Southern Tide at twenty-two-years old when in med school and followed a passion to create a clothing

This book presents a program of basic studies dealing with the science of oceanography. Various characteristics of the oceans are described, including features of the oceans, life within the oceans, and different ways of studying the oceans. Each of the twelve teaching units in this book is introduced by a color transparency (print books) or PowerPoint slide (eBooks) that emphasizes the basic concept of the unit and presents questions for discussion. Reproducible student pages provide reinforcement and follow-up activities. The teaching guide offers descriptions of the basic concepts to be presented, background information, suggestions for enrichment activities, and a complete answer key.

Millions of Americans experience some degree of hearing loss. The Social Security Administration (SSA) operates programs that provide cash disability benefits to people with permanent impairments like hearing loss, if they can show that their impairments meet stringent SSA criteria and their earnings are below an SSA threshold. The National Research Council convened an expert committee at the request of the SSA to study the issues related to disability determination for people with hearing loss. This volume is the product of that study. *Hearing Loss: Determining Eligibility for Social Security Benefits* reviews current knowledge about hearing loss and its measurement and treatment, and provides an evaluation of the strengths and weaknesses of the current processes and criteria. It recommends changes to strengthen the disability determination process and ensure its reliability and fairness. The book addresses criteria for selection of pure tone and speech tests, guidelines for test administration, testing of hearing in noise, special issues related to testing children, and the difficulty of predicting work capacity from clinical hearing test results. It should be useful to audiologists, otolaryngologists, disability advocates, and others who are concerned with people who have hearing loss.

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

"Influenza pandemics are unpredictable but recurring events that can have severe consequences on societies worldwide. This revised WHO guidance publication on pandemic influenza preparedness and response acknowledges that pandemic preparedness is centered around health sectors planning but must also be broader. WHO therefore advocates a "whole-of-society" approach to sustainable and ethical pandemic preparedness while focusing in more detail on the role of the health sector. The roles of WHO and national governments are outlined to create a better understanding of how health and non-health sectors, both public and private, all contribute to pandemic preparedness"--Publisher's description.

The activities and reading selections in Cause & Effect will guide students in making critical connections between actions and their effects, thus strengthening their comprehension throughout the curriculum.
